

## Arque Ltd – Environmental Policy

Arque recognises that its activities have an impact on the environment and is committed to improve its environmental performance, prevent pollution and minimise the harmful effects through caring policies and effective management.

Arque will apply the methodology and implement an Environmental Management System (EMS) accredited under ISO 14001 to identify and determine the environmental issues requiring attention and implementation of the measures to achieve improvement. We will comply with relevant legal and other requirements and commit to comply with future legislation. This policy provides the framework for setting objectives and targets and will be communicated to all persons working for or on behalf of the company and the general public on request.

In particular attention will be given to:

- The formation of Environmental awareness amongst those working for or on behalf of the company, providing training as necessary and encouraging sub-contractors and suppliers to adopt sound environmental practices
- The considerate use of land undergoing development having special regard to archaeological finds and the storage, treatment and disposal of any waste, hazardous or potentially toxic materials to avoid environmental harm
- The use and re-use of materials to minimise and curtail creating waste and, whenever practicable, using materials and products from sustainable sources
- To control the emission of pollutants, noise and dust, and the use of potentially harmful substances and treatments during construction activities
- The conservation of energy through sensible selection, use and management of resources, equipment, plant and transport
- The continued development, monitoring and investigation of systems, practices and procedures at each stage of construction to ensure the environment remains a foremost consideration.
